

THE GLP-1 COMPANION

Eat Enough Protein. Keep Your Muscle.

A support guide for people on GLP-1 medication:

14-day high-protein meal plan - 12 recipes -
muscle-keeping workouts - side-effect & hydration tips - trackers

SUPPORTIVE LIFESTYLE GUIDE - NOT MEDICAL ADVICE

Instant download PDF - print or use on any device

Please read first: important disclaimer

This guide is for general educational and lifestyle-support purposes only. It is NOT medical advice, diagnosis, or treatment, and it is not a substitute for care from your doctor, pharmacist, or registered dietitian.

GLP-1 medications (such as semaglutide/tirzepatide) should only be used under the supervision of a licensed healthcare provider. Always follow your provider's instructions. Talk to your provider or a registered dietitian before changing your diet, protein intake, supplements, or exercise - especially if you have any medical condition, are pregnant or breastfeeding, or experience side effects.

Nutrition values in this guide are approximate estimates and vary by brand, portion, and preparation. If you experience severe or persistent symptoms (severe nausea/vomiting, dehydration, dizziness, abdominal pain), contact your healthcare provider promptly.

By using this guide you agree that the author is not liable for how you apply the information.

Why this guide

On GLP-1 medication your appetite drops - great for weight loss, but it creates one big risk: eating so little that you miss protein and lose muscle along with fat. Losing muscle slows your metabolism and can leave you feeling weak. The fix is simple to say and easier with a plan:

- Prioritise protein at every meal and snack (many providers suggest roughly 20-30g per meal - ask yours for your target).
- Eat slowly and stop at comfortable fullness; smaller, more frequent meals are easier on the stomach.
- Stay hydrated and keep gentle strength movement in your week to protect muscle.
- Manage common side effects with food choices and simple habits.

This bundle gives you a done-for-you 14-day plan, quick high-protein recipes, a beginner-friendly muscle-keeping routine, side-effect tips, and printable trackers. Use what fits your life - and check with your provider.

14-day high-protein meal plan

Small portions, protein first. Swap freely. Aim to hit your daily protein target; sip water through the day.

Day	Breakfast	Lunch	Dinner	Snack
Day 1	Greek yogurt + berries + chia	Chicken & quinoa bowl	Baked salmon + veg	Cottage cheese + cucumber
Day 2	2-egg veggie omelette	Turkey & hummus wrap	Tofu stir-fry + edamame	Protein shake
Day 3	Protein smoothie (yogurt+whey)	Lentil soup + side of chicken	Lean beef mince + zucchini	Boiled eggs (2)
Day 4	Cottage cheese + tomato	Tuna salad (light mayo)	Chicken breast + broccoli	Greek yogurt
Day 5	Egg muffins (make-ahead)	Chickpea & feta salad	Baked cod + green beans	Edamame
Day 6	Skyr + walnuts	Turkey lettuce wraps	Salmon + cauliflower rice	Protein shake
Day 7	Scrambled eggs + spinach	Chicken & bean bowl	Tofu curry (light) + veg	Cottage cheese
Day 8	Overnight oats + protein	Grilled chicken salad	Shrimp stir-fry	Greek yogurt + berries
Day 9	Greek yogurt + seeds	Lentil & veg soup + egg	Lean pork + broccoli	Boiled eggs (2)
Day 10	Protein smoothie	Tuna & white bean salad	Chicken + roasted veg	Skyr
Day 11	2-egg omelette + cheese	Turkey chili (small bowl)	Baked salmon + salad	Cottage cheese
Day 12	Cottage cheese + berries	Chicken & quinoa bowl	Tofu stir-fry	Protein shake
Day 13	Egg muffins	Chickpea salad + feta	Cod + green beans	Edamame
Day 14	Skyr + walnuts	Grilled chicken wrap	Lean beef + zucchini	Greek yogurt

12 quick high-protein recipes

Approximate values per serving. Adjust portions to your appetite.

120g lean turkey mince + spices in lettuce cups + salsa.

~28g protein, ~250 kcal

Lentil & Veg Soup + Egg

Lentil-veg soup + 1 boiled egg on the side.

~22g protein, ~320 kcal

Skyr & Walnut Cup

150g skyr + small handful walnuts + cinnamon.

~20g protein, ~230 kcal

Keep your muscle: beginner strength routine

Do 2-3 times per week on non-consecutive days, plus daily walks. Start light, focus on form, breathe. Stop if you feel dizzy or unwell and check with your provider before starting.

Routine A (full body) - 2 rounds

- Chair/box squats - 10-12
- Incline push-ups (against wall/counter) - 8-12
- Seated or band rows - 10-12
- Glute bridges - 12-15
- Standing calf raises - 15
- Dead-bug core - 8 per side

Everyday habits that protect muscle

- Hit your protein target first at each meal.
- Aim for 7,000-9,000 steps if able.
- Prioritise sleep (7-9h) - recovery protects muscle.
- Add resistance bands as strength improves.

Managing common side effects (lifestyle tips)

General comfort tips only - contact your provider for severe or persistent symptoms.

Nausea

- Eat small, frequent meals; avoid greasy/fried foods.
- Try ginger tea or plain crackers.
- Eat slowly; stop before overly full.

Constipation

- Increase fibre gradually (veg, beans, oats).
- Drink more water; stay active with walks.
- Ask your provider about a fibre supplement.

Fatigue & hydration

- Sip water through the day; add electrolytes if sweating.
- Do not skip protein - low intake worsens fatigue.
- Small balanced snacks keep energy steady.

Heartburn / reflux

- Smaller portions; avoid lying down right after eating.
- Limit spicy, acidic, fatty foods if they trigger you.
